14.2	Alcoholic beverages, incl. alcohol. Free, low-alcoholic counterparts	0,070
15.	Ready-to-eat savouries and snacks	1,13

(*)Recital 18- Smoking by regenerated smoke is a process of treating food by exposing it to smoke which is regenerated by atomizing smoke flavourings in a smoking chamber under the time and temperature conditions similar to those for hot or cold smoking. In that case it is difficult to estimate how much of the smoke flavourings will be present in the final food as marketed due to loss of smoke flavouring during smoking. Therefore, the use should be in accordance with good manufacturing practices.
